Open Access Movement: a philosophy, a dance, a practice

from Columbia CDRS 1 month ago / NOT YET RATED

http://goo.gl/lZrm1H
I support open access at Columbia University. I believe that researchers and scholars should make their scholarly publications and the data on which they are based accessible to the public, to the extent permitted by legal and ethical considerations, through a digital repository based at Columbia University (e.g., Academic Commons) or through an appropriate alternative open-access repository.

2013: 500+ Signatures
2014: On track to surpass
Overview

Columbia Senate
Resolution Endorsement

APRIL 2005

1. That the Senate put on record its support for the principle of open access to the fruits of scholarly research;

2. That the Senate urge the University to advance new models for scholarly publishing that will promote open access, helping to reshape the marketplace in which scholarly ideas circulate, in a way that is consistent with standards of peer review and scholarly excellence;

3. That the Senate urge the University to monitor and resist efforts to impose digital rights management regimes and technologies that obstruct or limit open access, except as necessary to secure rights of privacy;

4. That the Senate urge the scholars of Columbia University to play a part in these open-access endeavors in their various capacities as authors, readers, editors, referees, and members of scientific boards and learned associations etc., (a) by encouraging and collaborating with publishers’ efforts to advance open access, (b) by retaining intellectual property rights in their own work where this will help it become more widely available, and (c) by remaining alert to efforts by publishers to impose barriers on access to the fruits of scholarly research.
Open Access Resolutions

From the Editor

*Tremor and Other Hyperkinetic Movements (TOHM)*, a fully open access peer-reviewed journal now indexed in PubMed Central, publishes clinical and scientific papers on tremor and hyperkinetic movements. In contrast to other publications focusing on disorders of hypokinesia (i.e., mainly Parkinson’s disease), TOHM emphasizes the non-Parkinsonian movement disorders, giving center stage to clinical observations and research in this area. In doing so, the journal aims to provide an international platform for experts and specialists in the field of hyperkinetic movements.
